

Event management

Manage burst, sewer overflow and water quality events quickly and effectively

EVENT MANAGEMENT ENABLES EVERYONE TO PLAY THEIR PART, WHEREVER THEY ARE, IN EFFICIENTLY DIAGNOSING AND RESOLVING EVENTS LARGE AND SMALL

CHALLENGES

Relevant information is hard to come by because it is held in different people's heads and disparate systems. This makes it difficult to keep everyone, in every location, up-to-date with every action and decision, and the rationale behind it.

For large events an incident room is set up and people often have to stay late or come into the office early or at weekends. Smaller events are managed in an ad hoc way and may escalate into large events, which results in time being lost in the diagnosis and resolution of events.

This type of management can lead to many complications, including missed or duplicated information and impeded decision making. All of this leads to more water loss, more pollution, larger customer impact, increased penalties and more damage to your reputation.

THE SOLUTION

SOFTWARE THAT:

- Helps ensure all appropriate actions are taken and none are duplicated
- Records actions and rationale - an irrefutable audit trail
- Enables decisions to be made in possession of all available information
- Enables people to track progress either by logging in, or by having it pushed to them by email/SMS
- Makes information available on all types of devices in all locations (office, field, home) making decision making possible from any location

RESULTING IN:

- Less water loss
- Less pollution
- Improved customer satisfaction
- Minimised penalties
- Minimised damage to reputation

WHY i2O?

i2O's solutions currently help more than 100 water companies in 45 countries. We monitor and control water supply to more than 50 million people around the world, helping to reduce leakage by up to 47% and burst frequency by up to 65%.
